

It's Algorand GreenHouse!!!!

Idea?? What should we really work on?? Something related to algorand blockchain would be cool right? What problems exist out there? A lot actually.

A Decentralized News Betting platform?

We really need
to stop the
spread of fake
news. How do
we exactly do
that?

Let's get started then!

Oh wait first
let me think
of features
that will help
me stand out
of crowd?

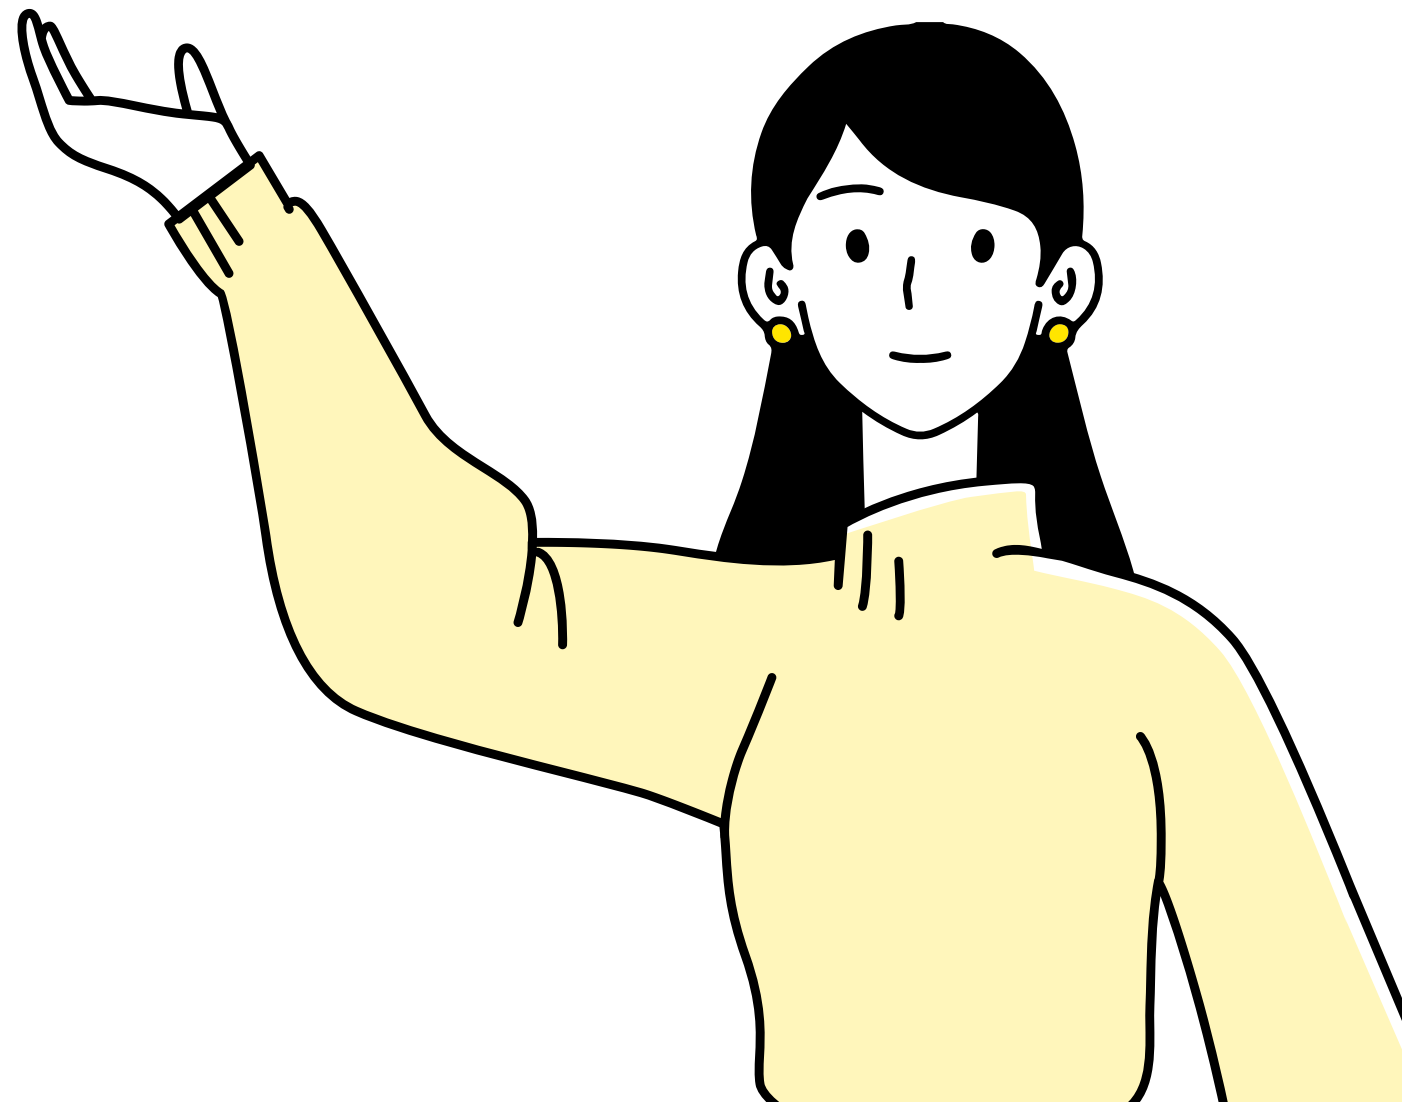

Features:)

- A decentralized platform to bet on news. Nice Idea:)
- Time bounded betting so that the news doesn't gets stale.
- Bet using tokens called FAKE COINS:)
- The winning side gets all of the money decuting some platform fee. The losing side gets **0**

We have used REACH Lang to write our smart contracts. And the user will bet using
FAKECOINS

FAKECOINS Quite a creative name:).
